# High-mix, high-complexity, low-volume

Semiconductor  
equipment

Healthcare

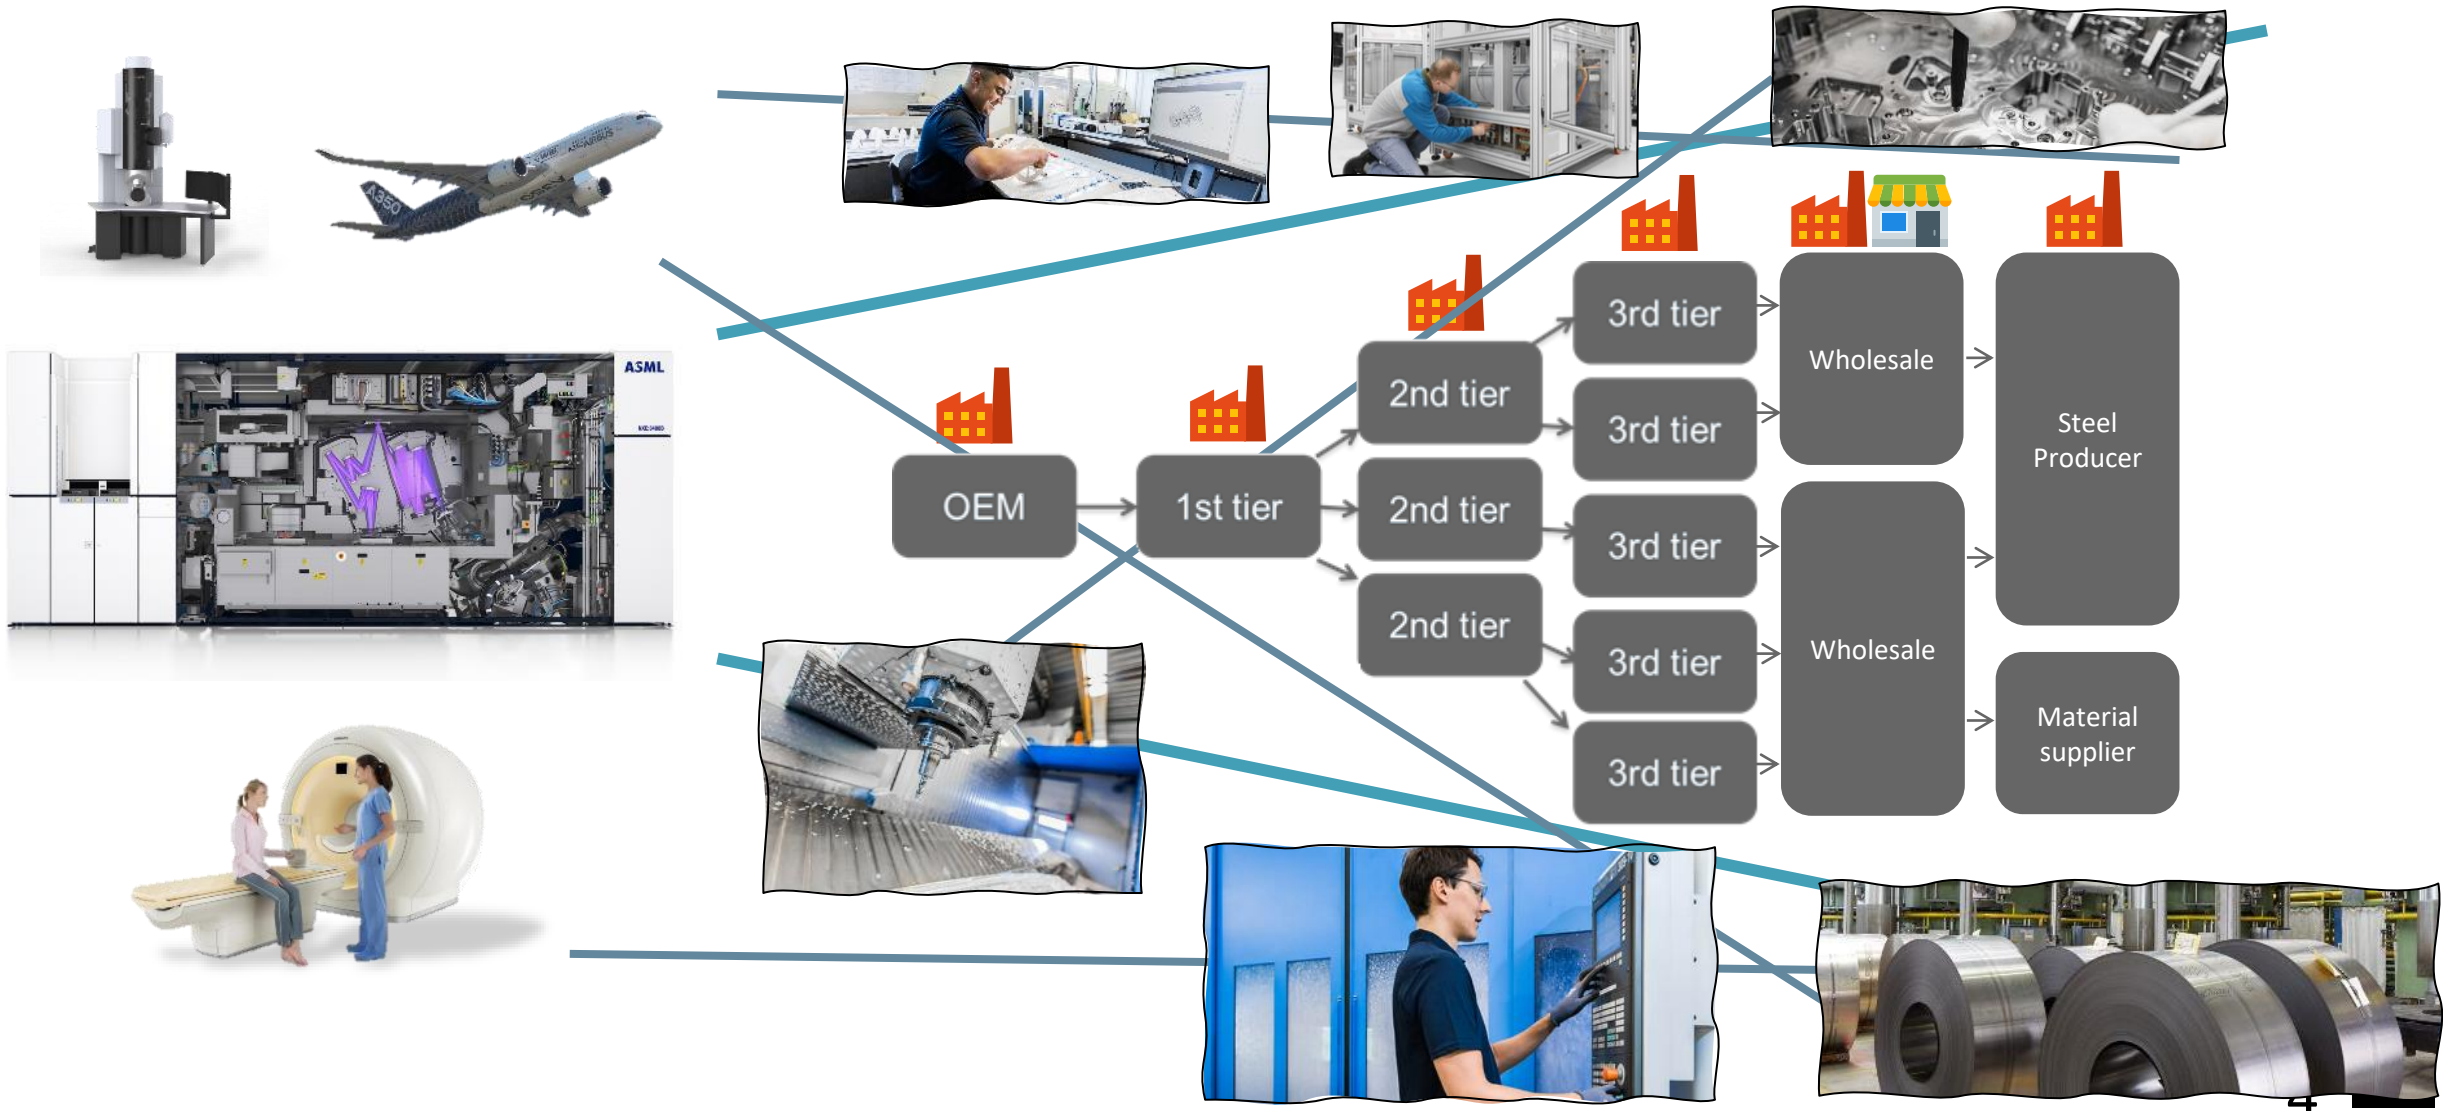

Scientific  
instrumentation

.... many other areas

High-complexity, high-mix, low-volume requires a **smart & connected network** of suppliers and OEMs

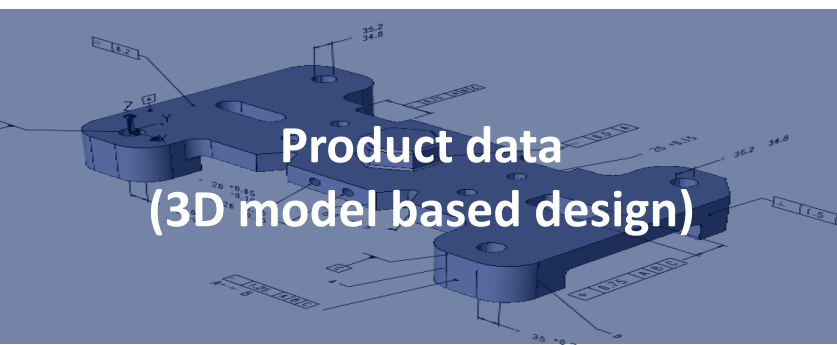

# Smart Connected Supplier Network = controlled data sharing at large

supply chain resiliency services  
purchasing & e-invoicing  
logistics collaboration

network of OEMs, 1<sup>st</sup>, 2<sup>nd</sup> & 3<sup>rd</sup> tier  
manufacturing companies

extended product lifecycle management  
maintenance  
collaborative engineering

**Supply chain, warehousing & logistics**

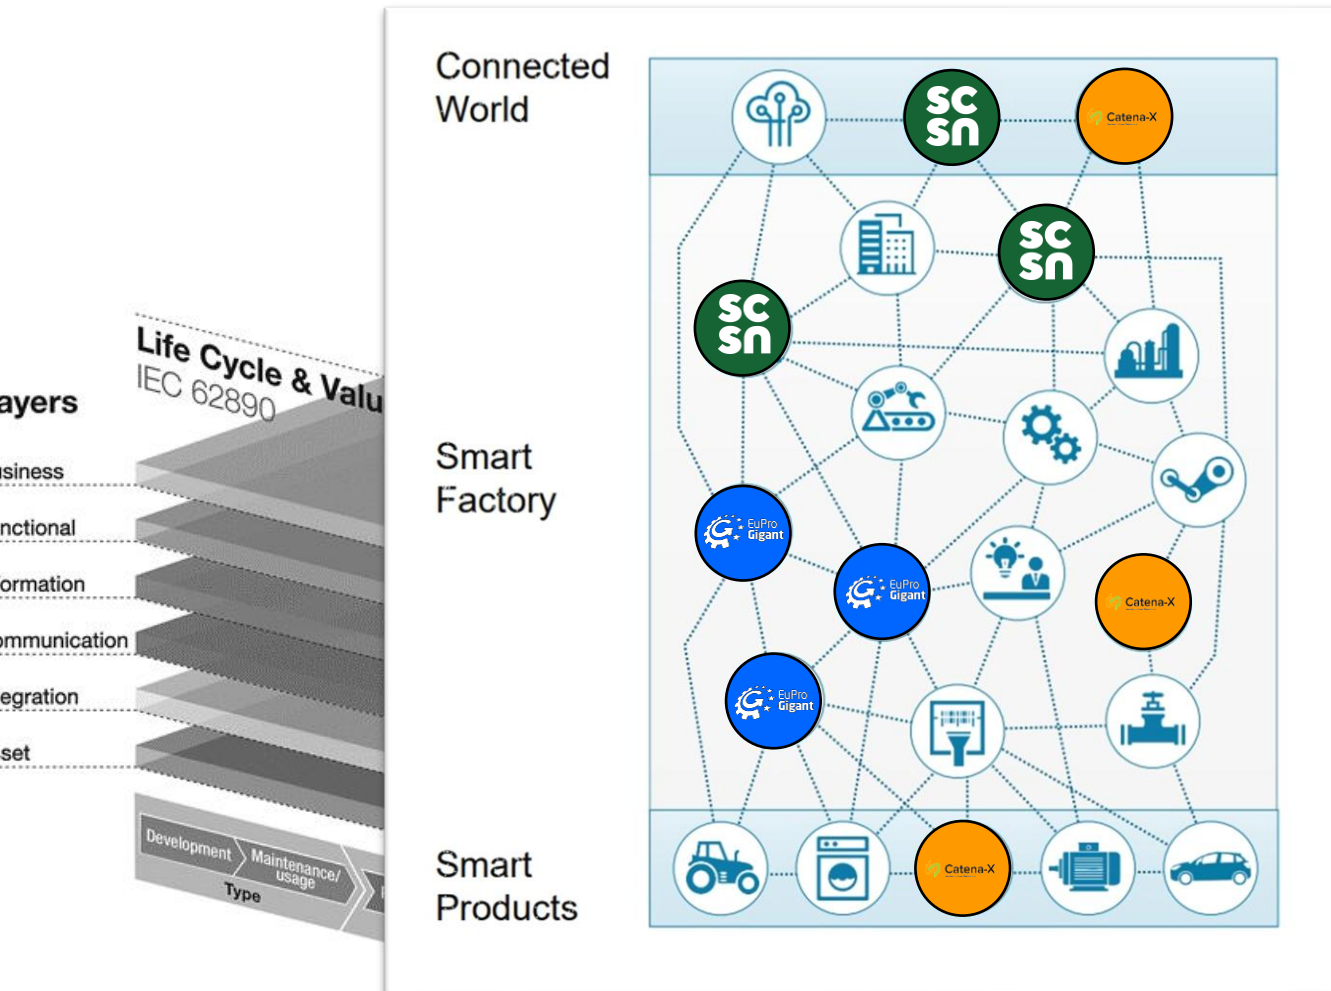

**Robots & other manufacturing capabilities  
using Industry 4.0 standards**

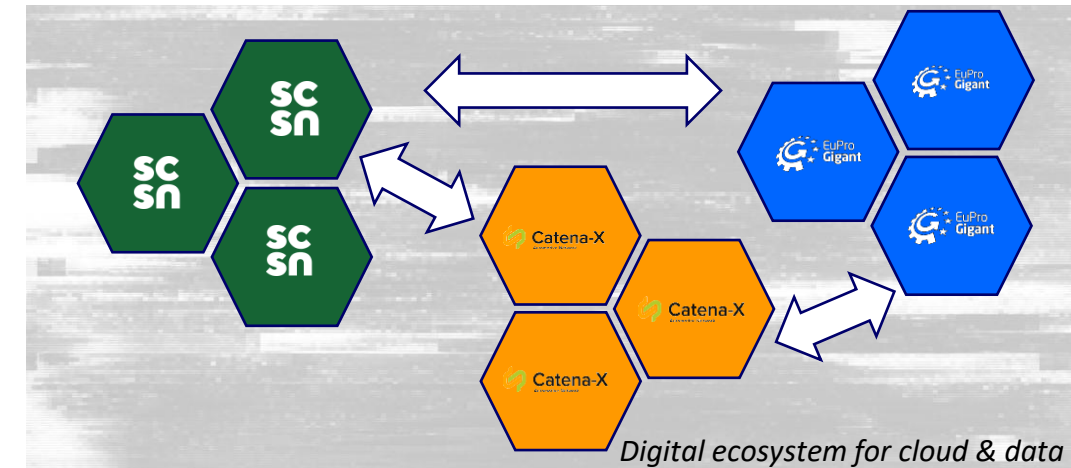

# Building a shareable digital twin of everything

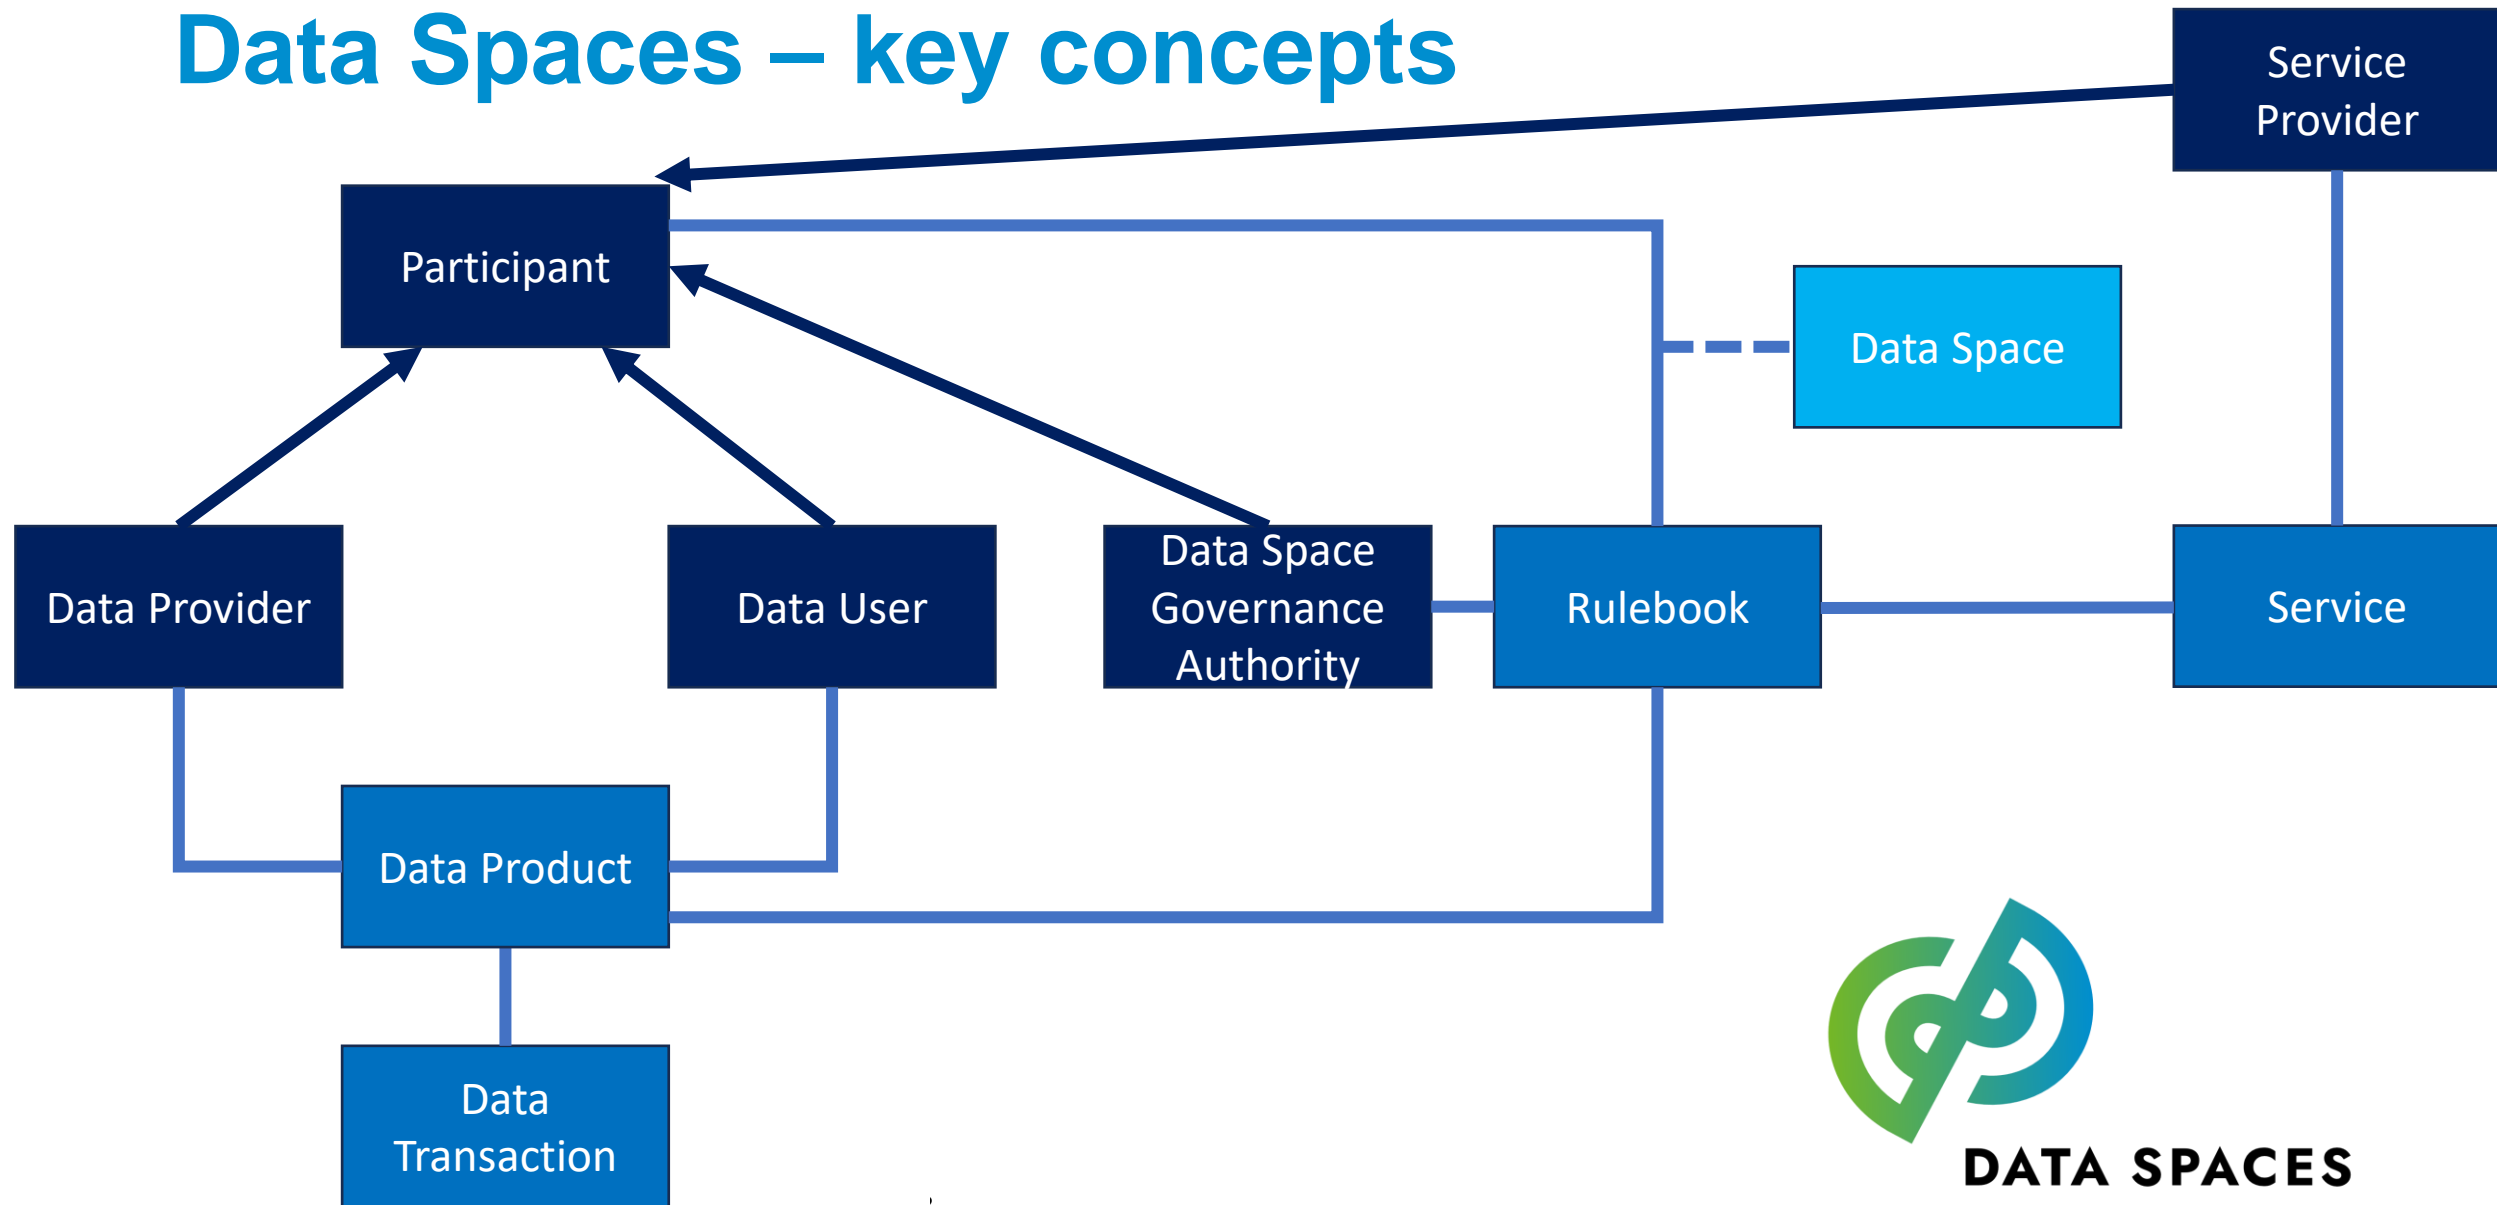

Source: Reference Architecture Model Industry 4.0

- A machine or organisational level **connector** or **participant agent** allows for the controlled sharing of data with others:
  - Manage identities & attestations
  - Publish data & -services
  - Negotiate and enforce access & usage policies
- The network needs to arrange **interoperability**, the **findability** of data, as well as **trust**

# Data Spaces – key concepts

**DATA SPACES  
SUPPORT CENTRE**

# How is this arranged in SCSN?

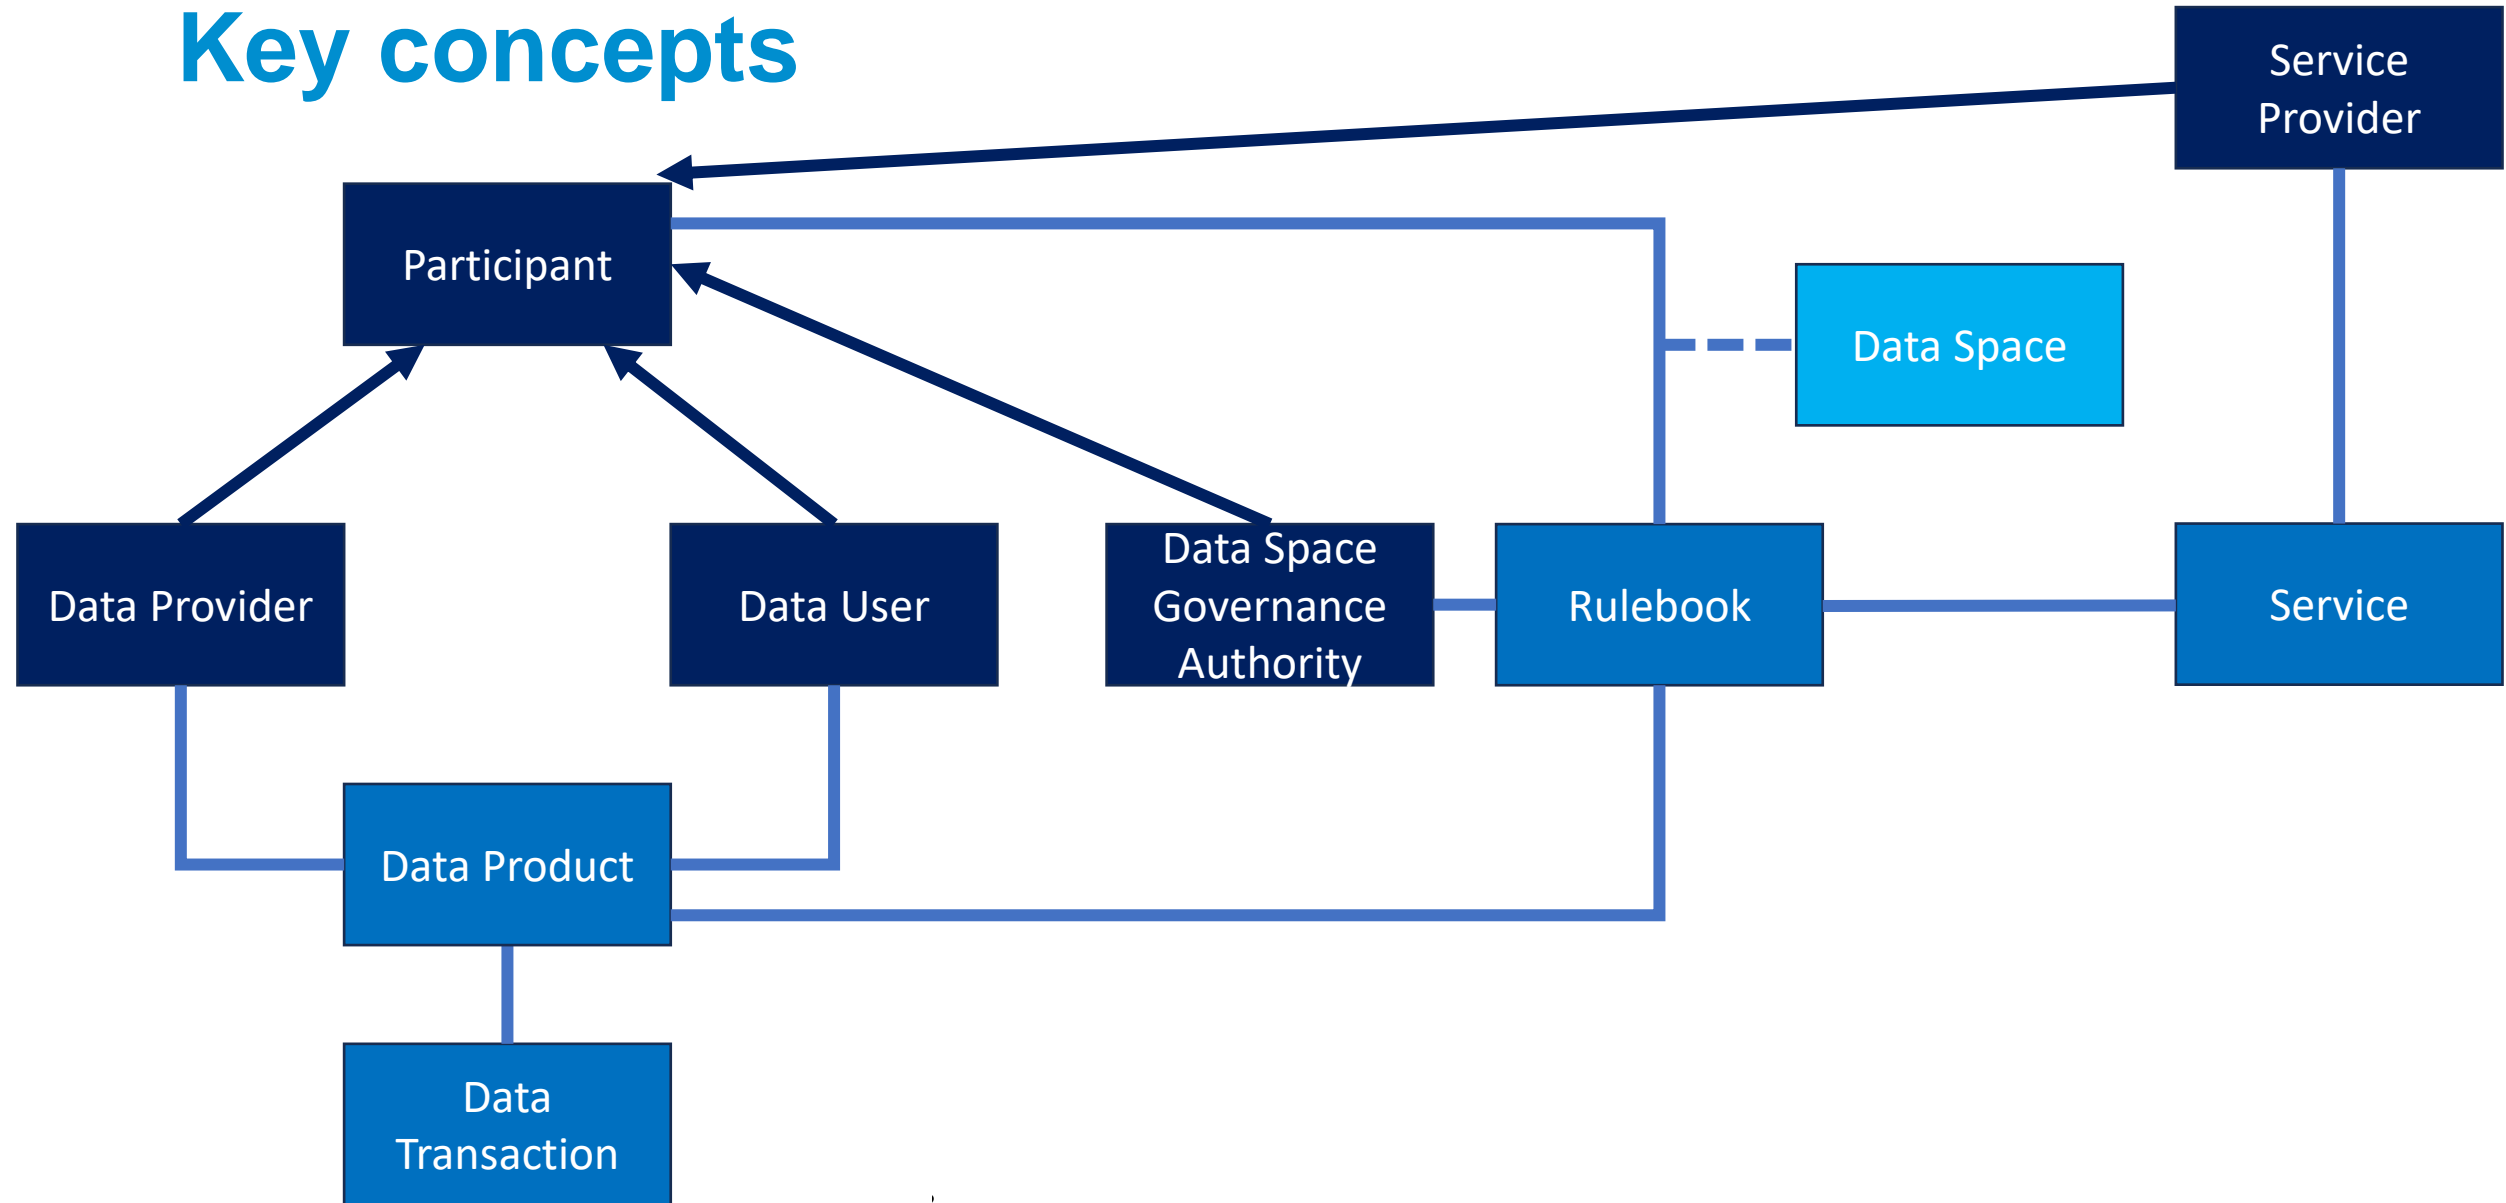

## Smart Connected Supplier Network today

- 400+ manufacturing companies in an operational data space
- 10+ service providers for providing data space connectivity
- 1 independent foundation to manage the rulebook
- “Connect once, communicate with everyone in the supply network”
- “Data sovereignty: you control the sharing of your data”

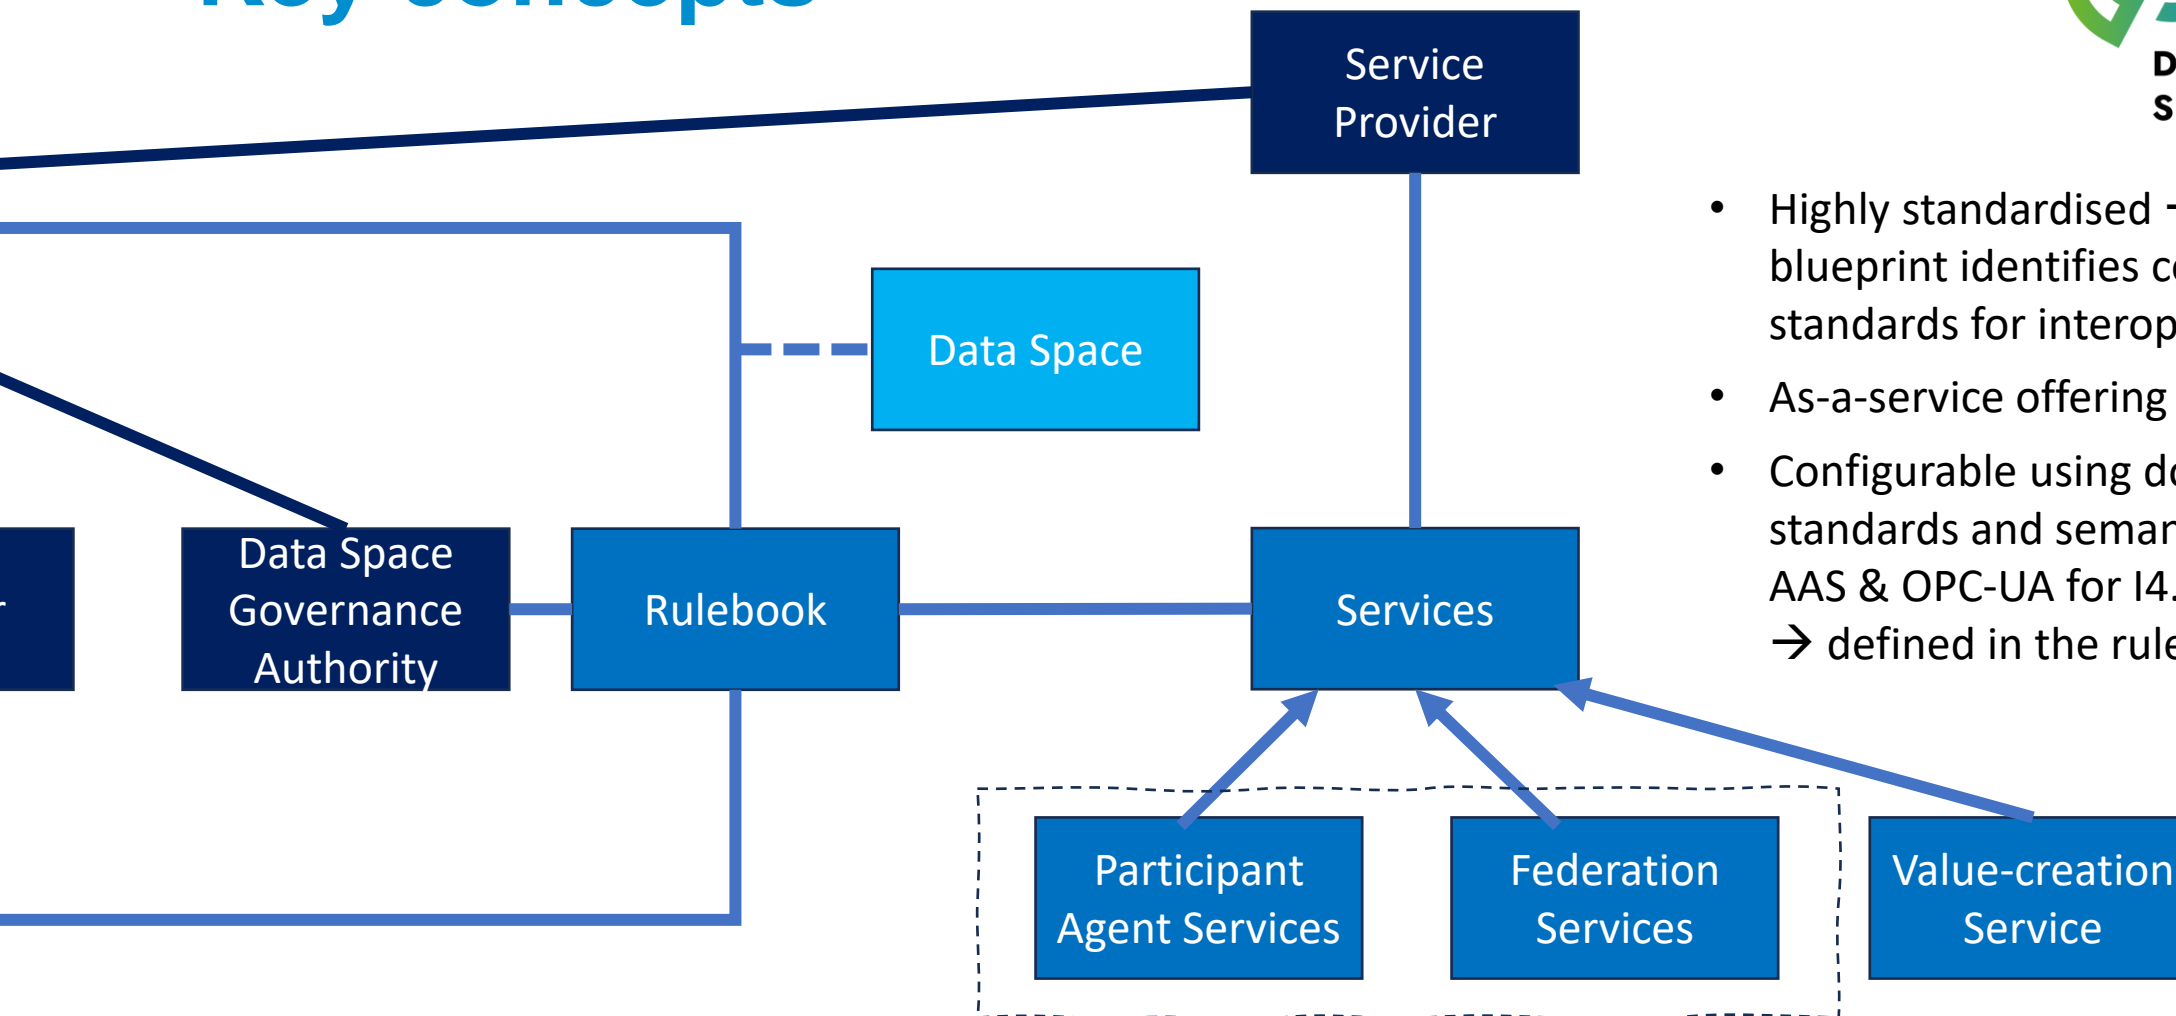

# Key concepts

# Key concepts

- Highly standardised → DSSC blueprint identifies common standards for interoperability
- As-a-service offering
- Configurable using domain-specific standards and semantics (e.g. IDTA AAS & OPC-UA for I4.0-applications) → defined in the rulebook

# What's Nxt?

## NXTGEN Smart Connected Supplier Network

- **Grow the network – focus on key supplier/customer-combinations**  
↓
- **Develop new services & manage the rulebook**  
digital product passports, model based design, manufacturing-as-a-service  
↓
- **Extend the required Data Space Infrastructure**  
To deal with new requirements (security, sovereignty, complexity, scale)  
In line with international developments (EU Data Strategy, Manufacturing-X)  
Cross-domain

# Future Data Sharing Infrastructure

## What are we talking about?

### New Trust Services

- Identification of assets
- Validation of attestations

### Advanced Access & Usage Policies

- Who is granted permission to access this data?

### Provenance & Traceability Services

- Compliant registration of data
- Future validation & traceability

### Digital Twin Registry

- Register of available digital twins
- Industrial Digital Twin Association (IDTA)

### Vocabulary Hub & Models

- Digital Product Passport
- Equipment capabilities
- Carbon Footprint Reporting
